

# Memory Screening

## A Closer look at Memory Changes

A **Memory Screen** is a wellness tool that helps identify possible changes in memory and cognition; it creates a baseline of where a person is at so that future changes can be monitored.

It's **Free** and only takes  
15 minutes!

Call the **ADRC of Jefferson County**  
for an appointment

**Dementia Care Specialist:**  
**920-675-4035**

### **Early detection is important**

*Treatment is possible. Stay in control of your life.*

#### ***Get immediate results!***

You may keep them for yourself and, if you request, we will fax them to your physician.

#### ***Early detection is important!***

Just as blood pressure, cancer, diabetes, or stroke screening contribute to prevention and better treatments, so does a **Memory Screen**.

#### ***Treatment is possible!***

Some types of dementia are reversible, like those caused by nutritional and vitamin deficiencies, depression, thyroid issues, and more.

#### ***Knowledge means you have more control!***

Dementias that are not reversible can often be treated with medications that could slow down the progress and preserve quality of life for a longer period of time.
